Olist Commerce360 - Physical Dimensional Model (Star Schema, schema 'project_dw')

4 fact tables share 6 conformed dimensions (fact constellation). Every relationship is dimension (1) to fact (many); every FK is mandatory (unknown member key = -1). dim_date is role-playing: the FK name gives the role.

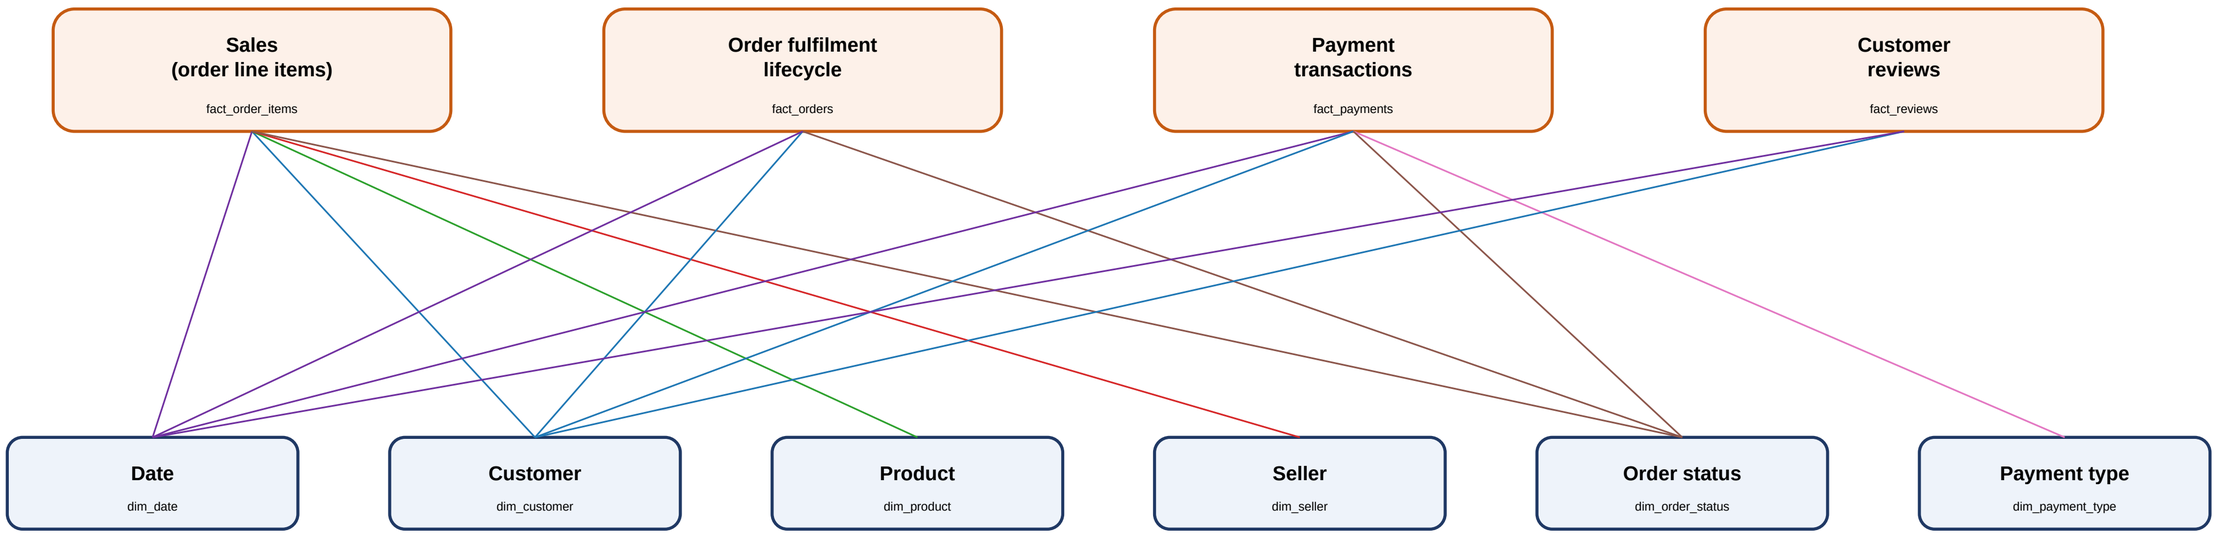
Olist Commerce360 - Conceptual Dimensional Model and Bus Matrix

Business processes (facts) and the business entities (dimensions) that describe them. No attributes or data types at this level.



Enterprise bus matrix (X = fact uses dimension; n roles = role-playing date)

Fact table (process)	dim_date	dim_customer	dim_product	dim_seller	dim_order_status	dim_payment_type
fact_order_items (Sales (order line items))	X (2 roles)	X	X	X	X	
fact_orders (Order fulfilment lifecycle)	X (5 roles)	X			X	
fact_payments (Payment transactions)	X	X			X	X
fact_reviews (Customer reviews)	X (2 roles)	X				

Fact types: fact_order_items, fact_payments and fact_reviews are transaction facts; fact_orders is an accumulating snapshot
(one row per order, milestone dates filled in as the order progresses).
Conformed dimensions: dim_date and dim_customer are shared by all four facts; dim_order_status by three facts.
Drill-across between facts is done by aggregating each fact separately to a shared dimension level, never by joining facts row-to-row.
